ZERO GRAVITY SOLUTIONS

Automate one operational workflow

Start with a paid pilot for one recurring workflow. Connect the systems that hold the facts, define the actions people approve, and compare completed outcomes with the process your team uses today.

The agreed scope

One workflow, agreed integrations, representative examples, and a clear boundary for approvals and exceptions.

What you receive

- A current-process baseline and agreed acceptance criteria
- A working pilot with evaluation cases and visible exceptions
- An operating-cost record, fallback, and handover instructions

What we need from you

A process owner, representative requests or documents, approved system access, and someone who can judge a correct outcome.

How we judge the result

Review quality, completed actions, exceptions, human review effort and cost against the baseline. Include failed integrations and a usable manual fallback.

What happens next

Agree on production implementation, a narrower test, or stopping after the evidence review.

Scope, fees, availability, and ongoing support are agreed before work begins.
