ZERO GRAVITY SOLUTIONS

Resolve a specific engineering decision

Bring a codebase, prototype or technical question and the decision it needs to support. We inspect the relevant evidence, explain the tradeoffs and identify a practical next step.

The agreed scope

One review question and representative journey, including relevant code, access boundaries, dependencies and operating assumptions.

What you receive

- A focused review with the evidence and limitations recorded
- Prioritized findings and comparable options
- A written recommendation and a validation or implementation brief

What we need from you

A decision owner, a runnable build or technical material, expected user roles and approved access to relevant systems.

How we judge the result

Trace material findings to inspected evidence. Distinguish what works, what needs repair and what remains unverified; agree the next investigation or release scope.

What happens next

Your team acts on the findings, or we scope implementation separately. A review does not itself approve a production release.

Scope, fees, availability, and ongoing support are agreed before work begins.
