ZERO GRAVITY SOLUTIONS

Add accountable capacity to your roadmap

Start with one blocked capability or delivery area. Agree on the skills, responsibilities and first useful increment, then connect engineers to your backlog, review process and release ownership.

The agreed scope

A defined delivery area, agreed capacity, access, review responsibilities and a shared working rhythm.

What you receive

- Agreed responsibilities, rates, capacity, and decision paths
- A reviewable first delivery with acceptance evidence
- Async updates, purposeful live reviews, effort reporting, and continuity arrangements

What we need from you

A prioritised backlog, an internal decision maker, repositories and release constraints. Capacity, rates and availability are confirmed together.

How we judge the result

Review accepted increments and their evidence. Keep blockers, review responsibilities and time or cost reporting connected to the agreed work.

What happens next

Review the fit and next priorities together, then adjust the scope or continuing capacity.

Scope, fees, availability, and ongoing support are agreed before work begins.
